ABSTRACT

Folat deficiency that happened during early period of pregnancy, has known as one of the factor that cause fetal abnormalities. That why it is important for pregnant women to get information about the rule of folic acid in preventing fetal abnormalities. From 93 women within reproductive age, 6 of them were pregnant. Pregnant women were given 30 tablets of 0,4 mg folic acid taken once a day, and the less 87 women who were not in pregnant state received 10 tablets of folic acid to be taken once a day.

Key words : folic acid, NTD, pregnancy
