Abstract

This undergraduate thesis entitled Types of Passive Construction in the Novel Say You’re Sorry by Michael Robotham is aimed at analyzing the types of passive voice found in the novel and figuring out which one among them is the most dominant used in the novel. The data source of this study was taken from Michael Robotham’s Say You’re Sorry which was published by Sphere in 2012. This study is a descriptive qualitative and quantitative research and the method used to collect the data was the documentation method using the note taking technique. The result of this study shows that there are only three types of passive voice found in the novel: be passive, get passive, and bare passive. From 219 passive sentences taken from the novel, 207 of them is be passive with the percentages of 95% while there are only 7 sentences of get passive with percentage of 3% and 5 sentences of bare passive type with the percentage of only 2%.

Key words: passive voice, be passive, get passive, bare passive

Kata kunci: Kalimat Pasif, pasif be, pasif get, pasif bare

1. Background of the Study

Language (spoken or written) is a ‘tool’ that people use to communicate with others. The form, meaning, and context of language could be analyzed by learning the linguistic study. It incorporates a number of aspects which often include phonetics, phonology, morphology, pragmatics, semantics, and syntax. Syntax is a component of the language that interconnects words into larger units, one of which is a sentence. A sentence could be written in active or passive voice. A sentence is written in active. The sentence is performing the action while it could also be written in passive voice when the subject of the sentence has something done to it by someone or something.

Passive sentence could be found in many literary works including novels. In this study, a thriller novel entitled Say You’re Sorry by Michael Robotham was used as the source of data to be analyzed.
in order to find more about passive voice and its types used in the novel. The novel tells a story about two friends Tash and Piper who got kidnapped and locked up for about three years by anonymous.

The topic in this study was chosen because the passive analysis on novel is rarely found and even though the use of active voice in literary works is still dominant compared with the passive voice, there are still many sentences of passive voice found in novels with different types. The study focuses on the types of passive voice clauses or sentences found in the novel Say You’re Sorry by Michael Robotham and compared them to find out which types are more dominant to be found in the novel.

2. Problems of the Study
   a) What are the types of passive voice found in the novel Say You’re Sorry?
   b) How does the context support the meaning and relationship between verbal and visual signs?

3. Aims of the Study
   a) To figure out the types of passive voice found in the novel Say You’re Sorry
   b) To find out the percentage of each type found in the novel Say You’re Sorry

4. Research method
   Referring to the problems that already formulated, there are four components of the research method, namely: data source, method and technique of collecting data, and method and technique of analyzing data.

4.1 Data source
   The source of data in this study was taken from Michael Robotham’s Say You’re Sorry, which was first published in 2012 by Sphere. This novel tells a story of the kidnapping of two best friends Tash and Piper. The whole novel was used as the data source from chapter 1 to chapter 51 consisting of 435 pages. It was chosen as the data source it is shortlisted for the CWA Gold Dagger for best crime fiction 2013 and many passive sentences could be found here.

4.2 Method and Technique of Collecting data
   The data in this study were collected and selected using the documentation method through several steps. First, the data were taken by reading the content of Michael Robotham’s Say You’re Sorry. Second, the sentence or clauses which were in the form of passive voices were noted.

4.3 Method and Techniques of Analyzing data
   The data in this study were analyzed using the descriptive qualitative method in which all the data collected were classified and put in different tables according to the appropriate categories. The analysis of this research was based on the theory of passive voice proposed by Geoffrey Pullum (2014).

4.4 Method and Technique of Presenting the Result of Data Analysis
   This study used the descriptive qualitative method in presenting the data. It means that the data were presented descriptively based on the theory by explaining and describing it in words or sentences through some steps as follows: first the collected data were divided in tables based on each type of passive voice. Some examples of passive voices then were taken to be analyzed and explained in chapter 3. The percentage of each sub-type was also given in a table while the description of it was put below the table.
5. Results and discussions
5.1 Types of Passive be

According to Pullum, there are seven types of passive voice. They are passive with be, prepositional passive, bare passive, embedded passive, adjectival passive, get passive, and concealed passive. However, there are only three types of passive voice found in the study; namely passive with be (Long) and (Short), Get passive and Bare passive.

5.1.1 Passive with be

Passive with be is a type of passive in which the main clause verb is a form of the verb be, and it has a past-participial VP complement. Be passive could be analyzed based on the subject, agent, and tenses.

1. Subject

Nordquist (2017) stated that a subject is one of the two main parts of a sentence that usually appears before the predicate to show what the sentence is about or to know who or what performs the action. As shown below, the subject is commonly a noun, pronoun, noun phrase, or compound subject.

a. Subject Pronoun

Subject pronoun is a pronoun that takes a noun as the subject of a sentence. It can be singular or plural and it can be masculine or feminine when the gender is known, but when referring to an inanimate, the gender-neutral form ‘it’ is used.

Data 1

He isn’t fazed by police interviews because he’s been here before. (Pg. 323)

Based on the sentence in data 1, he refers to the character named Toby Kroger. In the novel, this name is already mentioned twice before the sentence such as in; “Toby Kroger sits with his legs …” (Pg. 322) and “Kroger was kicked out of school…” (Pg. 322). In order to avoid the repetition, the name of the character is changed into he when the other characters talk about him. He itself is the third-person singular and masculine.

b. Noun Subject

Noun can act as the subject of a sentence. Noun is part of speech that could be in the form of thing, place, or names as in data 9, 10 and 11.

Data 2

... and ropes are pulled tight. (Pg. 13)

In data 2, ropes is the subject of the sentence. Ropes is a thing, length of fibers that are braided together into a stronger form.

b. NP Subject

In English grammar, a noun phrase is a word group with a noun or pronoun as its head.

Data 3

The statement is signed and dated by Probationary Constable Gerald Brindle Hughes. (Pg. 410)

c. Compound Subject

A compound subject is two or more individual noun phrases coordinated to form a single, longer noun phrase joined by and or or.

In data 4, both Camera and microphone are things or nouns that are combined to form a single unit used as tools in the story in the press conference.

Data 4

Camera and microphone are positioned above. (Pg. 70)
2. Agent and Agentless

In contemporary English Grammar, the agent is the noun phrase or pronoun that identifies the person or thing which initiates or performs an action in a sentence (Nordquist, 2017).

The sentence in data 5 is an example of passive voice with agent. The noun or noun phrase that would be the object of an active sentence appears as the subject of sentence or clause in the passive. The subject of a sentence or clause featuring the passive voice typically denotes the recipient of the action (the patient) rather than the performer (the agent).

Data 5
A lot of motorists were stranded by the blizzard (Pg. 22)

Contrast with passive be with agent or long passive be, in constructing passive be without agent or short passive be, the by-phrase is usually omissible. In data 6, the subject we are chained up by someone or something that is not mentioned. One reason to make it possible is that the agent is stated in the previous sentence so it does not need to be mentioned twice.

Data 6
We were chained up in an attic room. (Pg. 5)

3. Tense

In the novel there are only simple present, simple past and present progressive tenses found.

a. Simple Present Tense

The simple present tense is the basic form of English tenses in which the action or event regularly takes place in present times.

Data 7
This concept of the successful psychopath is often forgotten or ignored by the medical profession. (Pg. 47)

The sentence in data 7 is the example of passive be in the present tense. It is formed with the verb to be in present tense is followed by VP forgotten and ignored. It describes or remarked the general realities that happened, how the medical profession especially the psychiatrists often ignored the issue.

b. Simple Past Tense

The simple past tense is the basic form of English tenses indicating the action or events occurring in past times.

Data 8
“Mrs. Hadley, I spoke to Hayden Mc Bain. He said that Natasha was raped and mutilated by a pedophile.” (Pg. 220)

The sentence in data 8 is the example of passive be in past tense. It is formed with the verb to be in past tense was followed by the past participial of verb raped and mutilated. It describes or emphasized an event that happened in the past.

c. The present progressive

It indicates continuing action, something going on now.

Data 9
He is being questioned about those murders at the farm. (Page 83)

The sentence in data 9 is the example of passive be in present progressive tense. It is formed with the verb to be in present tense is plus being followed by the past participial of verb questioned. It indicates that the action is going on during this period and still
happens at this moment; it is mentioned by the character in the novel.

5.1.2 Get Passive

In the get-passive, the subject receives the action of the verb in the form of *get* plus a past participle.

**Data 10**

*Aiden got wasted at the party* (Pg.188)

Seeing the sentences above, the get passive is normally constructed with human subject that is non-agentive, affected. It emphasizes more on the subject and on what happens to the subject as a result of the event rather than the agent. It emphasizes the subject referent’s condition which is usually on unfavorable conditions just like *got sent to see the headmistress* and *got wasted at the party*. The events that are perceived are either having fortunate or unfortunate consequences for the subjects.

5.1.3 Bare Passive

We can have passive with no auxiliary verb at all. They are called bare passives because they are kinds of naked without their auxiliary verb and cannot be put into tenses form.

**Data 11**

*She leads me upstairs, pausing at the open door to Emma’s room where we watch our youngest sleeping, surrounded by stuffed animals and her gloriously imaginative paintings.* (Pg. 434)

The passive clause above only consists of subject preceded by *by* and *the* past participle of a verb. The subject of the clause is *our youngest* followed by *by phrase* and past participle *surrounded*. It doesn’t contain *be* (was, were) as it does in passive with *be* but we know that the clause implies the same meaning as it has in *our youngest are surrounded by*.

5.2 The Percentages of Passive Voice Types in the Novel Say You’re Sorry by Michael Robotham

The Percentages of Passive Voice Types in the Novel *Say You’re Sorry* by Michael Robotham are given in the table below:

<table>
<thead>
<tr>
<th>No</th>
<th>Sub-types</th>
<th>Numbers</th>
<th>Percentages</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Be-passive</td>
<td>207</td>
<td>95%</td>
</tr>
<tr>
<td>2</td>
<td>Get-passive</td>
<td>7</td>
<td>3%</td>
</tr>
<tr>
<td>3</td>
<td>Bare passive</td>
<td>5</td>
<td>2%</td>
</tr>
</tbody>
</table>

The table above shows that there are 207 sentences that used *be* passive structure, so it is more dominant than the other types of passive voice. While Bare passive had the least number used in the novel.

6. Conclusion

According to Pullum, there are seven types of passive voice. They are passive with be, prepositional passive, bare passive, embedded passive, adjectival passive, get passive, and concealed passive. However, there are only three types of passive voice found in the study, namely passive with be (Long) and (Short), Get passive and Bare passive.

From 219 passive sentences found in the novel, *be* passive is more dominant used in the novel with a percentage of 95% while bare passive type is the least used among others with only a percentage of 2%.
